Experience

NVIDIA/ Automation Test and System Engineer

OCTOBER 2020 - PRESENT, AUSTIN, TX

DELL EMC/ IT Network Development Analyst

MAY 2019 - OCTOBER 2020, DURHAM, NC

Worked on the design, installation, management, and support of organization-wide networks. Maintained hardware and software, analyzed technical issues, and ensured operability of the networks. Delivered Tier 1 and 2 network ticketing support. Managed, developed, and supported code bases relating to the automation of the network and related work.

DELL EMC / Intern

MAY 2018 - AUGUST 2018, DURHAM, NC

Worked on developing a Django based web application for server utilization and characterization. Created unique profiles for different server types in order for other servers to receive a utilization score and to be monitored. Developed an interactive frontend for this application allowing a user to see a snapshot of the utilization of servers over a month, week, or day.

WEI RESEARCH GROUP / Undergraduate Researcher

SEPTEMBER 2017 - MAY 2018, RALEIGH, NC

Innovating cost-effective and field-deployable imaging and sensing platforms for point-of-care diagnostics. Working on miniaturized sensing devices, new sample preparation methods on a chip, as well as novel plasmonic bioassays with ultrasensitivity. Ultimately, aiming to foster next-generation integrated smart diagnostic platforms that are sensitive and robust for single-molecule detection and bioanalysis.

Education

UNIVERSITY OF ILLINOIS - URBANA CHAMPAIGN / MS

Computer Science

JANUARY 2023 - PRESENT, ONLINE

NORTH CAROLINA STATE UNIVERSITY / BS Electrical Engineer

AUGUST 2015 - MAY 2019, RALEIGH, NC

NORTH CAROLINA STATE UNIVERSITY / BS Computer Engineer

AUGUST 2015 - MAY 2019, RALEIGH, NC

Courses

Computational Photography - CS 445

Computer vision techniques to enhance, manipulate, and create media from photo collections, such as panoramic stitching, face morphing, texture synthesis, blending, and 3D reconstruction.

Theory and Practice of Data Cleaning - CS 513

This course identifies data quality issues throughout the data lifecycle, and reviews specific techniques and approaches for checking and improving data quality. Techniques are drawn primarily from the database community, using schema-level and instance-level information, and from different scientific communities, which are developing practical tools for data pre-processing and cleaning.

Applied Machine Learning - CS 441

Techniques of machine learning to various signal problems: regression, including linear regression, multiple regression, regression forest and nearest neighbors regression; classification with various methods, including logistic regression, support vector machines, nearest neighbors, simple boosting and decision forests; clustering with various methods, including basic agglomerative clustering and k-means; resampling methods, including cross-validation and the bootstrap; model selection methods, including AIC, stepwise selection and the lasso; hidden Markov models; model estimation in the presence of missing variables; and neural networks, including deep networks. The course will focus on tool-oriented and problem-oriented exposition. Application areas include computer vision, natural language, interpreting accelerometer data, and understanding audio data.

Data Structures and Object-Oriented Programming for Electrical and Computer Engineers - ECE 309

Advanced programming topics focusing on Data Structures and Object-oriented design. Common data structures described and implemented, including linked lists, hash tables, trees, balanced trees, heaps, graphs, and B-trees. Object-oriented programming, inheritance, polymorphism, abstract types, and generic types.
